TECHNICAL SKILLS

- **Programming:** Python, Bash/Shell Scripting, C#, C
- **Linux:** File permissions, users & groups, systemctl services, journalctl logs, cron scheduling
- **Cloud:** AWS (EC2, VPC, S3, IAM), cloud networking and storage fundamentals
- **Containers & CI/CD:** Docker, Kubernetes, OpenShift, CI/CD pipelines, Agile & Scrum
- **Automation:** Python os & subprocess modules, YAML/JSON configuration, logging and error handling
- **Tools:** Git, GitHub, VS Code, AI-assisted coding and troubleshooting
- **Game Development:** Unity, AR Foundation, ARCore, Photon PUN 2 (multiplayer networking)

PROJECTS

Server Health Monitor | Python, subprocess, YAML, Linux

- Built a Python monitoring tool that samples CPU, memory and disk usage and compares each reading against thresholds defined in a YAML configuration file.
- Writes timestamped logs for every check and raises alerts when a threshold is crossed, with error handling for failed commands and missing files.

Linux Resource Alert & Auto-Recovery Script | Bash, cron, systemctl, journalctl

- Built a cron-scheduled Bash script that alerts when disk usage passes 85% or memory usage passes 80% on a Linux server.
- Restarts failed services through systemctl, reads service state from journalctl and records every action in a log file for review.

Photon Bladers – Multiplayer AR Game | Unity, C#, Photon PUN 2, AR Foundation, ARCore Android

- Designed and shipped a real-time multiplayer AR battle game for Android as a solo project, from design through a working device build.
- Implemented the full player flow — Photon server connection, lobby with quick match, blade selection and a networked AR arena — keeping game state synced across devices.

EDUCATION

SRM Institute of Science and Technology, Kattankulathur 2023 – 2027
Bachelor of Technology in Computer Science and Engineering (Gaming Technology) · CGPA: 7.13/10

CERTIFICATIONS

- **IBM DevOps and Software Engineering Professional Certificate** – IBM | Coursera
  Linux commands and shell scripting, cloud computing, Git & GitHub, containers with Docker, Kubernetes & OpenShift, CI/CD.
- **AWS Cloud Practitioner Essentials** – AWS | Coursera
- **Google IT Automation with Python Professional Certificate** – Google | Coursera
